

# University of A.B.C

## Mid Term Test

Duration 01 hour  
July 2024

[ 1. Write a short paragraph about the positive impact computers and the internet have on people's lives? ]

{  
Computers have a positive impact on learning and communication. They allow us to chat with friends, learn about the world, and stay out of trouble. They provide a new way to talk via websites like Facebook and Myspace. Computers and the internet are great tools for learning about other countries and current events. They can be more engaging than traditional learning and help keep children safe.

}

[ 2. What obstacle did the builders of the Empire state Building face regarding dirigible docking? Write a small paragraph. ]

{  
The builder of the Empire State Building faced obstacles when attempting to allow a dirigible to dock at the top of the building. The architect could not simply put the mooring mast on top of the building's flat roof, as a dirigible would be held to the building by a single cable tether, which would add stress to the building frame. The stress from the dirigible load and wind pressure would have to be transmitted down to the foundation, so the building's steel frame would have to be transmitted modified and strengthened to accommodate this new situation. Over sixty thousand dollars of modifications would have to be made.

}

[ 3. Is laughter important in a relationship? Express your ideas. ]

{  
I believe laughter is an important part of any relationship. In all of my relationships, whether with friends, family, or a significant other, laughter has always been an essential element. One of my close relationships is with my friend, Person 1, and it's filled with laughter. We always have a great time together. For example, last year, she and I went to park with some friends, and I tore a ligament in my knee when I tried to jump on Person 2's quad. We laughed about how silly I was and joked about our friends. The first time we met, I made her laugh, and since then, we've been awesome friends.
